

Essentials Briefs

HIMSS Analytics' Essentials Briefs combine executive-level acumen with Voice of Customer (VOC) insight to deliver real-world knowledge in a format you can use.

The HIMSS Analytics Difference

Essentials Briefs go beyond quantitative research and include information from the HIMSS Analytics® Database to provide an unmatched level of marketplace understanding.

The HIMSS Analytics Database captures information from 5,400 + hospitals, 40,000+ medical facilities, 600+ ACOs and 1,400+ HIEs within the United States. By maintaining relationships with decision-makers at every hospital in the country HIMSS Analytics is able to provide insight into legacy and emerging IT systems, as well as current and emerging technologies.

Essentials Briefs Include

- Detailed application conditions
- Adoption levels for applications with relevant market drivers
- Current vendor market share positions for major applications

Current Essentials Brief

The Mobile Devices Essentials Brief is highlighted below. Key points include:

- Over half of US hospitals reported use of smartphones and/ or tablet computers at their facilities
- 69% of respondents noted that they used apps to access clinical information; however, only 33% reportedly believe they can access most or all of the clinical systems technologies they need via smartphones/tablet computers
- One-third of clinicians indicated that use of smartphones / tablet computers would create overall efficiencies in care, such as eliminating redundancies
